

# Success with Diskeeper® 2008: Food Service

## **Chris Huddleston, Leprino Foods**

We purchased Diskeeper for our servers. One is currently being used for our Novell Groupwise. We have a unique environment. We have Novell Groupwise running on a Windows Server 2003. It was taking about 13-15 hours to backup the groupwise server. We couldn't figure out what the problem was and then after doing some research it looked like we were having some disk I/O problems. One suggestion was to defrag the drives. We shut down the server one weekend and ran the Windows® defrag which only was able to defrag about 7 percent of the drive.

Diskeeper is a great product and has really helped reduce our backup time by 5-8 hours. That's a tremendous improvement.

The other license that we purchased will be used on our Windows File Server. We are migrating from a Novell Netware file server to a Windows File server and Diskeeper should keep it running smoothly.

One of my friends work environments had Diskeeper loaded on every PC and they said it made everything run better.

## **Robert Kegley, Stop & Shop Supermarket**

Diskeeper Pro Premier runs automatically. Just install it and leave it alone. I feel that Diskeeper 2008 is a big improvement from the previous release due to fact that it is much faster and FragShield™ configures automatically. I like that is an install and run application, meaning that it needs little user intervention. Keep up the good work!!!

## **Jeff Orton, Sysco**

We have received the Diskeeper software. I received it the same day actually. It was very nice that I was able to download the software package rather than wait for a retail set.

We have installed Diskeeper and currently have about 75% of our machines running it. The software works great and has made a big difference on some of those computers.
