

Success with Diskeeper® 2008: Telecommunications Firms

Tom Steele, Network Management Systems and Storage

I still do technical architecture for Sprint, mostly focused on the computing platforms that support managing and monitoring of our network.

Sprint is pretty much an EMC shop when it comes to SAN. There may be a few IBM Shark SANs still around. There is only one HP SAN that I know of and it is connected to a highly specialized system with a proprietary database.

We are, however, beginning to deploy more blade servers and most are running Windows®, so keeping their storage defragged is pretty important.

Diskeeper is now part of the available software for our enterprise issued laptops.

David A. Andersen, Optus

I would happily recommend Diskeeper—to anyone. I find myself going to Diskeeper's control center to see if it's 'still' REALLY WORKING.

Diskeeper is really THAT good. I don't even know it's running. As to Diskeeper's functionality, it's absolutely superb. It keeps my system running 'smooth as silk.'

Thank you to all of you at Diskeeper HQ for a very, very useful program.

Kenneth E. Linger, Synergy Solutions, Inc.

Diskeeper 2008 server was very easy to setup and use and the performance gain was noticeable, especially on servers with limited resources.
