

Without the right tools in place to leverage the benefits and value of your classroom technology, without the confidence that your students are not left unsupervised or exposed to outside resources and without the controls in place to guarantee your classroom equipment is always available for use when you need it.....How were they hoping you would have time for Teaching ?

Introducing NetSupport School, 14 years in the making, 3 million+ users and a simple proposition, One product - everything you need for complete classroom management.

Classroom Instruction & Monitoring

With NetSupport School, Teachers and Trainers can improve the efficiency of classroom instruction by centrally instructing Students on their computer, keep Students on task by monitoring application and web usage, improve support through online help and chat requests, and save time by quickly polling the class and showing instant results. Teachers and Trainers can also record all screen, keyboard and mouse activity on a Student workstation to review later or to replay to the class.

With educational budgets under increasing pressure, NetSupport School enables schools, colleges and training institutions to maximise the return from the IT infrastructure already in place. Installed on over 3 million computers, find out why NetSupport School is consistently Top of its Class.

Features you would expect from the market leader

Powerful Classroom Management - Power On/Off all computers, Remotely Log On/Off all computers in a single action, create custom classroom layouts and more.

Student Register - Generate and store Student attendance records and prompt for custom information unique to your school.

Interactive Lesson Plans - Pre-schedule activities and resources for the class, track lesson progress in real-time and share plans with other teachers.

Student Instruction - Show the Teacher's Screen to all members of the class, or show a selected desktop (if the teacher uses multiple monitors) or even show just a selected application. Show a Recording of a previous remote control session to the class or broadcast a multimedia file (including sound). Unique to NetSupport School you can also leave a full recording of the presentation on each student desktop so they can review the presentation later.

View Student Screens - Monitor the entire class or selected students. View using high quality scalable thumbnails of each PC, mouse over for larger zoom view or click for full 1:1 remote control.

On Screen Annotation - Use a wealth of annotation and presenting tools to aid in your presentations and retain student focus.

Application Metering and Control - Monitor all applications in use in the class, including those in background, open and close applications remotely, record a full history of use for the lesson for every student. Use approved and restricted lists to control application availability.

Internet Metering and Control - Offers the same level of control as Application Metering. Also provides granular website blocking, allowing access to certain pages at a selected URL but not access to the rest of the site. Works across browsers and also includes FTP blocking.

Group Chat, Messaging and Audio support, all under the control of the Teacher.

Instant Surveys with visual results feedback to both Teacher and Students.

Portable Tutor - No need to pre-install - carry the software on your memory stick and use when needed.

Testing and Quiz module supporting real time tests and scoring, support for 8 different question types, examination grading levels, progress tracking and more.

Wireless Support designed from the ground up, including mobile class lists.

Teacher Toolbar - **NEW** - Remains accessible when the main application is minimised, providing quick access to key features when using an Interactive Whiteboard or other applications.

Security - Complete multi-layered security throughout the product, including unique security keys, access control by licence, Active Directory support allowing policy- based controls that can limit which system users are able to run the NetSupport School components on. The Tech Console also provides a Security check mode to identify systems without all security options in force.

Unique Features in NetSupport School, all included as standard.

Student Journals - **NEW** - During a typical class, all appropriate items relating to the subject can be captured and automatically included in a PDF file for post-lesson review by each Student. This NEW feature includes a full record of Lesson details and Objectives, Teacher and Student notes, Screenshots, Survey results, URLs used during the lesson and individual Test results.

Student Information Bar - Provide key information to the class throughout the lesson. Class details, objectives, time remaining, available websites and applications the class are approved to use, NEW Student Rewards and much more.

True Printer Management - Prevent Printing, Set Quota's, Remove duplicate print jobs, allow the Teacher to authorise print requests and NEW Print visuals.

Real-time Keyboard Monitoring - See exactly what the class are typing in real-time, irrespective of the application or website in use. Now includes NEW target keywords for content tracking and full history by Student and application.

Instant Messenger Monitoring and Control. Monitor messenger chats, prevent sign-in to leading messengers including MSN, AOL and Yahoo or simply prevent use.

Device Control - Prevent data being copied to (or from) USB or CD/DVD devices. Flexible control allowing prevention of file copy but still allowing documents to be read.

Internet SafeSearch - Override search engine preferences automatically and force content restrictions on delivered results.

Internet Co-Browse - Rather than simply showing your students a website, why not browse the site on your PC in the knowledge that the same site is being browsed on each student computer. As you scroll down a page, so do they. At any point the Teacher can provide access to the students so they can reference the pages presented themselves, safe in the knowledge they cannot go anywhere else.

Key Show - May be a simple action but when presenting an application to the class, it is important they learn the primary navigation methods. When a teacher selects CTRL+P for printing, this key combination is shown to the class.

Teacher Security - During a presentation in class when a Teacher accesses a Student's web browser, NetSupport School will prevent them mistakenly typing or visiting any non-defined websites and avoid any embarrassing sites being displayed.

Virtual Whiteboard - School features a powerful virtual whiteboard - draw diagrams, annotate charts and images and even pass access to a student so they can collaborate directly onto the whiteboard.

On-line Resources - NetSupport provides a free online resource centre where Teachers can both upload and download test resources, images, curriculum content and more. A simple way to ensure you get the most out of your software.

Tech Console - **NEW** - A dedicated console designed specifically for Technicians and Network Managers. View all computers across the campus, monitor computer screens in each classroom, generate a full Hardware and Software inventory from each PC, remotely manage services and processes, deliver files to all selected computers in a single action and much more.

Get Support - **NEW** - A single click of the toolbar button within the Tutor console will immediately connect the teacher to an available technician who can then provide assistance remotely from anywhere on campus.

"The Best Classroom Management Solution !" or so every sales rep claims.

Don't you find it confusing when every vendor claims to have the best solution, Yet when you look at the basics you need in an ICT classroom, most end up lacking many of the key features ?

Can you really see at any given point exactly what all your students are typing and if they are staying on Task? Can you monitor or prevent the use of Instant Messenger? Can you control your class using USB sticks on their computers? Can you allow your students to Print, but only what they need and nothing more? When you are viewing the class screens as thumbnails, can you actually read them? Are your students presented with a list of approved websites and applications...or do they have to guess ?

NetSupport School has been delivering classroom management for 14 years and is used on over 3 million computers. Do we claim it is the best solution? We really don't need to, plenty of others have done it for us already.

"As a teaching tool NetSupport School is in the enviable position of having little, if any, serious competition. It simply excels in its field and the new features are valuable additions which make the top product in this market even better."
- Network Computing.

"Without doubt one of the slickest, most cost-effective teaching software products available." - PC PRO

"Any School investing in NetSupport School will find that in a very short time it has become one of its most valuable teaching and network management tools. Thoroughly recommended" - Educational Computing & Technology

"As a teaching and training aid for classrooms with networked PCs, NetSupport School has virtually no serious competition. It offers a range of excellent features that'll make light work of designing, deploying and monitoring classrooms and backs these up with some of the best remote control tools currently on the market." - PC Plus

"Look no further if you want the perfect network training and teaching tool, as NetSupport School is in a league of its own. The jewel in its crown is undoubtedly the Testing module which provides the tools to create tests and exams and deploy them over the network simultaneously to multiple systems."

"The systems greatest feature is its stability."
- Network Times

"NetSupport School has more than doubled our computer classroom efficiency...we probably would have shut down our lab if we had not found this product ..NetSupport School has removed our teachers' fear of using technology"
- Zion Preparatory Academy

"Having used NetSupport School for over 5 years I have found it to be an invaluable support tool as well as an excellent teaching and classroom control aid. Teaching staff praise the ease with which NetSupport School can be used to focus students on the subject matter of their lessons. I thoroughly recommend this product to both Teachers and education ICT support staff alike." - The Joseph Whitaker School

NetSupport School: Classroom Management

NetSupport School is a class leading training software solution, providing Teachers with the ability to instruct, monitor and interact with their Students either individually, as a pre-defined group or to the overall class.

Combining advanced classroom PC monitoring, real-time Presentation and Annotation tools, with an innovative customised Testing suite, Internet and Application control, automated Lesson Plans, Printer Management, Instant Messenger control, Content Monitoring and Desktop Security, this latest version of NetSupport School rises to the challenge and requirements of today's modern classroom.

"Schools looking for a complete classroom management solution need look no further than NetSupport School as it is, quite literally, in a class of its own."
