

Software Pursuits' SureSync software provides a unique, cost-effective solution for data protection, availability, distribution, and file sharing. SureSync is a synchronization and replication software package, providing your organization complete control over how you copy, protect and synchronize data across your network with reliable and powerful features.

► **Availability: Disaster Recovery/Data Protection**

The need to protect data and maintain a high level of availability is why many organizations turn to SureSync to complement tape backup methods. SureSync gives IT professionals a reliable option to protect files and enable continuous access to the protected file copies.

The growing importance of offsite backups makes SureSync a perfect choice for your remote backup solution. Ensure your files are offsite and available by utilizing SureSync as part of your backup and recovery solution.

► **File and Content Distribution**

SureSync has the capability to deliver your corporate data to over 32,000 destinations. While many companies will not need to utilize this power, it is good to know your software solution can handle your network's need, no matter how large or small your job is.

You can utilize SureSync to distribute any type of file, such as daily reports, virus definition updates, application software, web content, etc. Automating data distribution will not only save valuable IT resources, but it can increase knowledge and productivity throughout your organization.

► **Global File Sharing**

SureSync's flexible synchronization methods allow files to be shared throughout your organization, allowing users access to local file copies, providing easy and quick access to information they need to perform their jobs.

As files are created, updated, or deleted, those changes will be replicated to all other destinations participating in the file share, improving employee's productivity as they can expedite jobs more rapidly, provide better service to customers, and deliver updated information to colleagues immediately.

► **Synchronizing Web Content**

Do you manage a webfarm that needs to have identical content on multiple web servers? Do you need to have these files updated everytime a change is made? SureSync can synchronize web content in real-time to multiple machines, automating continuous updates while maintaining identical web content on multiple web servers.

► **PC / Laptop Data Protection**

SureSync will allow you to replicate and synchronize data which resides on PCs, laptops, or workstations, allowing individual users to protect data on the PC to another machine or drive.

# SureSync Features

## SureSync Features Deliver

SureSync's flexible features ensure that you are in control of your data. The SureSync product comes with many standard features, but we also offer many advanced features that will improve performance and allow you to take advantage of SureSync in many different scenarios.

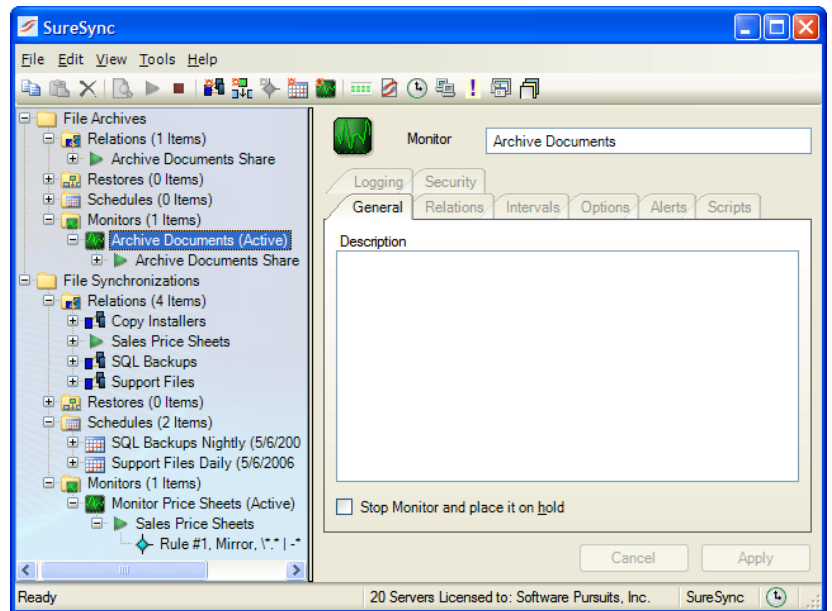

### ▶ Mirroring Files and Directories

SureSync controls the method of copying and transmitting files through 'Rules'. SureSync's flexible Rule set allows you to mirror files one-way, two-way (bi-directional), and between multiple paths, allowing you to copy and transmit files any way needed.

### ▶ Scheduling Synchronization Tasks

SureSync's flexible scheduling allows multiple jobs to be included in a single schedule or multiple schedules. Within each schedule, you can automate jobs daily, specific days of the week/month, weeks of each month, or months of each year.

**NEW:** Scheduler runs as a true service, eliminating the need for DCOM configuration.

### ▶ Copy / Preserve Security

Within SureSync, you are able to control the copying of security related settings for both Windows and Network.

### ▶ Remote Object Technology

SureSync uses remote object technology which allows jobs to be started and monitored from machines other than the one running the job.

## New Features in SureSync 5.0

### ▶ Job Security Controls

SureSync has database security down to the job level. Permissions can be assigned on Group Folders, Relations, Schedules, and Real-Time Monitors allowing different users different levels of access to SureSync.

### ▶ New Preview Structure

SureSync's preview function has been completely redesigned for simplified viewing of large synchronization jobs.

### ▶ Global Job Progress

The new SyncStatus feature allows you to view status of all of your SureSync machines enterprise wide without the need to have access to the SureSync databases, making management of remote replication simple.

### ▶ Updated Interface & Simplified Wizards

SureSync's interface has been updated in .NET with a cleaner and simplified look and feel. Job creation wizards have been simplified to continue bringing our customers the best replication product on the market.

### ▶ Organize Group Folders

Group Folders allow the user to organize relations, schedules and monitors into individually named folders for simplified management of replication jobs and management of group security.

### ▶ Maintain Data Integrity

SureSync has always used byte by byte comparisons to ensure your data replication maintains integrity. Now SureSync gives you the option to validate each file copy, using our CRC option to provide an extra layer of protection.

# SureSync Add-on Products

SureSync's powerful add-on products enable various features that allow you to maximize the product's potential. All add-on products require licensing for themselves and the base SureSync product. Refer to our contact information on the following page to get in touch with an Account Manager to assist you with the product that will best suit your needs.

## SPIAgent Add-on

Ensure high availability and improved replication performance with SureSync's product add-on, SPIAgent. SPIAgent provides the technology to perform real-time replication and more. Below is a list of features that are included when you license the SPIAgent Add-on.

### ► Real-Time Monitors

Real-time replication increases data availability by continuously monitoring data for updates. Copy files immediately after they change and avoid folder scans that are necessary for scheduled jobs.

**NEW:** Change Journal Supported

### ► Adaptive Delta Technology

SureSync copies only the changes made to a file, reducing synchronization time and decreasing the consumption of network resources.

**NEW:** Process deltas to non-Windows Machines

### ► Quality of Service (QoS)

QoS allows you to manage the amount of bandwidth consumed by each SureSync job. QoS directly monitors and controls the communications links, providing a more advanced method to control bandwidth.

### ► File Compression

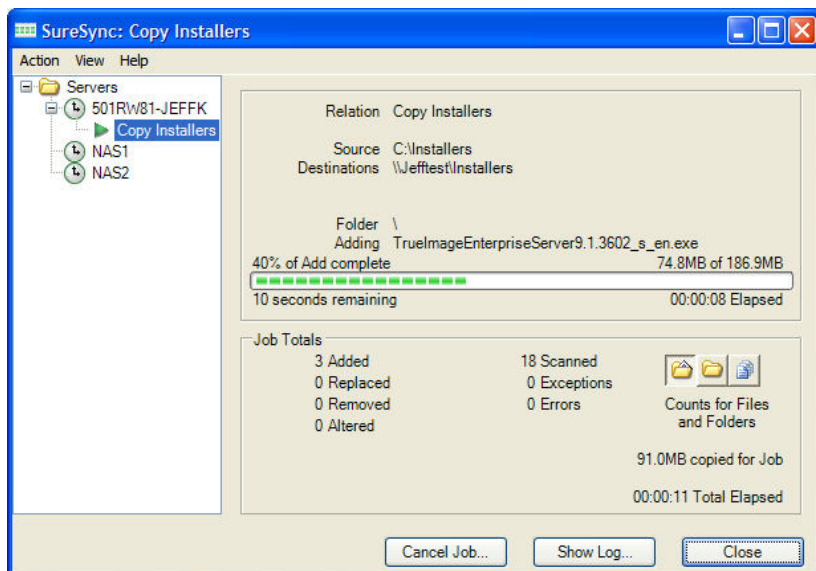

Transmit files in a smaller package across your network by compressing them.

### ► TCP/IP Transmissions

Transmissions across the Internet give you more options on how you connect to remote machines.

### ► Encryption

Ensure your files are being transmitted securely by utilizing the option to encrypt each file transmission.

## SPIAgent File Locking Add-on

The file locking add-on enables a powerful new level of file sharing. When maintaining the same file across multiple locations, you need to ensure updates are not occurring in multiple locations. The File Locking Add-on will lock all file copies as read-only when a user is updating their local copy.

## ArchiveSync Add-on

SureSync's ArchiveSync Add-on allows users to create versioned backup copies of files, providing an efficient disk-to-disk backup solution. Versioned file copies allow users to quickly restore files to a specified point-in-time, without sifting through tape backups. Additionally, when archiving or restoring, the ArchiveSync Add-on will allow you to backup and restore security privileges as well.

## Advanced Open File Support (AOFS) Add-on

The AOFS Add-on allows you greater flexibility over the files you replicate and protect to backup servers or NAS devices. The AOFS add-on provides the ability to replicate files which are open exclusively or open locked to other machines on your network, making it a valuable disaster recovery option.

**Note:** Using Windows Server 2003 or later? SureSync is able to capitalize on Windows VSS technology which means you would not need the AOFS Add-on licensing.

# SPI Info

## Try SureSync for 30 Days – Free

At [pixel.com.au](http://pixel.com.au), you can download a fully functional 30-day trial version of SureSync to evaluate. When you are ready to purchase, we will provide you with a new serial number, meaning you will not have to reinstall or change the synchronization tasks you have setup.

SureSync software products are available for purchase from Software Pursuits, Inc. or from a growing network of international distributors, resellers, and systems integrators. To purchase SureSync software, call us at 1800 674 935 or visit our web site, [pixel.com.au](http://pixel.com.au)

## Pricing

	Server Licensing	Workstation (WS) Licensing
<b>SureSync</b>	\$495.00 / server	\$69.00 ea.
<b>Add-On Products</b>		
<b>SPIAgent Add-On</b>	\$200.00 / server	\$40.00 ea.
<b>SPIAgent File Locking Add-On</b>	\$300.00 / server	\$75.00 ea.
<b>ArchiveSync Add-On</b>	\$100.00 / source server	\$30.00 / source WS
<b>Advanced Open File Support (AOFS) Add-On</b>	\$299.00 / source server	\$42.50 / source WS

\* Upgrade & Support Plans are available on an annual basis and entitle customers to free upgrades and priority technical support.

## Software Pursuits, Inc.

Software Pursuits, Inc. (SPI) has been designing and delivering innovative software solutions for enterprise information systems since 1975. SPI's founders started with a passion for making complex computing tasks simple by creating software solutions that are flexible, easy-to-use, and reliable.

Today, SPI continues to employ IT professionals who understand the intricacies of their customers' problems. SPI believes problems can easily be addressed by providing dependable, predictable performance in both products and services. The company maintains its dedication to provide the highest level of support to its customers.

## System Requirements

SureSync will run on the following operating systems:

- Windows 2003
- Windows 2000
- Windows XP or Vista

SureSync can synchronize data to operating systems such as Windows 95, Windows 98, Windows NT 4.0, and non-Windows machines such as Macintosh and Linux machines via UNC path but the software itself must be installed on one of the supported operating systems listed above.

SureSync takes advantage of current Microsoft technologies. The system(s) running the full SureSync installation must also have the following:

- Microsoft .NET 2.0 Framework
- Microsoft Data Access Components (MDAC) 2.8
- Microsoft Jet 4.0 SP8

The SureSync installer will check for the appropriate versions of the .NET Framework, MDAC, and Jet. If your system needs to be updated the installer will give you the option to install these components.
