

Lumension Enterprise Reporting™

Increase Security and Regulatory Policy Compliance and Maintain Audit Readiness

The expanding influence of government regulations and industry standards and the increasing need to demonstrate compliance with internal policies make corporate governance and risk management a top priority for organizations worldwide. As companies plan for the future, the link between IT and business consistently ranks as one of the top three priorities for CIOs.¹

Consolidate Patch and Vulnerability Data Throughout the Enterprise

IT senior executives need timely, accurate system visibility, configuration conformance data, vulnerability management analysis and reporting to help assess business risk and meet regulatory compliance.

According to Forrester Research, "Senior managers today must not only manage and measure the information security program but they must also translate those measurements into meaningful reports for senior executives."²

Lumension Enterprise Reporting provides:

- » Fully customizable and centralized business intelligence solution
- » Consolidation of vulnerability and configuration data across the enterprise
- » Assessment of business risk through powerful and granular data vulnerability analysis
- » Proof of security policy and regulatory compliance status

Key Features

- » Auto Report Generation and Distribution
- » Comprehensive Pre-Defined Report Library
- » System Configuration Reporting
- » Efficient Data Consolidation
- » Extensible to 3rd Party Reporting Tools
- » Open Reporting Schema
- » Policy-Based Reporting
- » Automated Data Transfer
- » Data Purge Management
- » Instantaneous Vulnerability Results

Key Benefits

- » Ensures Audit Readiness
- » Delivers Multiple Views of Aggregated Information
- » Integrates with Existing Systems and Reporting Tools
- » Drives Lower TCO

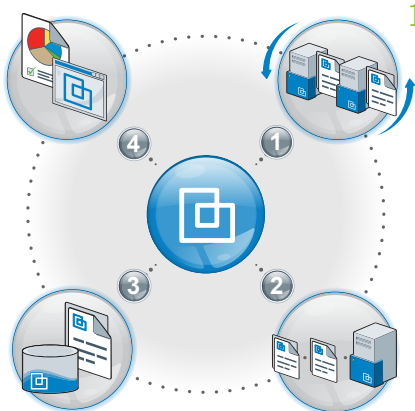

"Lumension enables us to track software licenses dynamically. This is very important when signing contracts and license agreements with Microsoft and IBM We're also J-SOX regulated, which allows us to develop clear policies and procedures regarding patch management."

Anthony Sica - Executive Director of IT, Shiseido

1. Gartner EXP's annual CIO survey 2007 and 2008

2. Khalid Kark, "The Myths of Information Security Reporting," Forrester Research, March 23, 2006

How Lumension Enterprise Reporting Works

- 1. Collect** - a data snapshot from each Lumension Patch and Remediation™ server in the environment, on a pre-defined, automated basis.
- 2. Upload** - data to a separate Enterprise Reporting server, via secure RSA encrypted transmissions.
- 3. Consolidate** - the data into the central Enterprise Reporting data warehouse repository.
- 4. Report** - analyze the centralized data with drill down capabilities.

Key Features

Auto Report Generation and Distribution: Schedules automated report generation and immediate email distribution of reports to authorized users.

Comprehensive Pre-Defined Report Library: Delivers 29 standard reports for vulnerabilities, patch deployment, configuration, inventory and compliance. Reports are not fixed and may be extended to meet organizational needs.

Efficient Data Consolidation: Views current status of vulnerability management efforts with up-to-the-minute reports.

Extensible to 3rd Party Reporting Tools: Works seamlessly with third party reporting tools including SQL Reporting Services, Business Objects, Crystal Reports, and more.

Open Reporting Schema and Customized Reporting: Data views make it easier to find reporting data; underlying queries are exposed to easily create custom reports.

Policy-Based Reporting: Provides global view of vulnerability status for all enterprise assets provides a unified look at the health of your enterprise.

Instantaneous Vulnerability Results: Allows information targeting to an organization's specific functional groups as well as summary views and trending.

Minimal Network Impact: Utilizes a separate server to minimize disruptions to Lumension Patch and Remediation, enabling you to run reports without interrupting key vulnerability management tasks.
